

Introducing the AffirmX Cybersecurity Risk Assessment Tool

Delivered through AffirmX's online Risk Intel Platform, the AffirmX Cybersecurity Risk Assessment Tool is designed to help you identify your institution's cybersecurity risks and level of preparedness to address those risks. A **smart questionnaire** guides you through the **FFIEC Inherent Risk Profile**, assessing how each of your products and services affect your institution's risk profile. It also guides you through the **FFIEC Cybersecurity Maturity Assessment**, which identifies risks and determines their cybersecurity maturity. Responses are applied to AffirmX's **risk-scoring algorithm to assign risk ratings** to each category of the assessment. Those responses and scores **generate a comprehensive, written report** that allows you to easily identify specific areas and levels of risk and to identify whether your incident response programs and internal controls are appropriate to address those levels of inherent risk.

The AffirmX Cybersecurity Risk Assessment Tool helps you:

- Identify the factors that contribute to your institution's overall cyber risk;
- Assess the level of your preparedness to address those risks;
- Evaluate whether your preparedness is appropriately aligned with your risk profile;
- Determine the risk management practices and controls that could be improved or further actions that could be taken to reach the desired level of preparedness; and
- Enhance your overall risk management strategy

In addition, it provides your institution:

- On-demand access to its Cybersecurity Risk Assessment questionnaire;
- Risk scoring for each category identified in the FFIEC self-assessment tool;
- Comprehensive and risk-coded Cybersecurity Risk Assessment report that you can generate upon completion of the questionnaire; and
- Online storage vault to retain the electronic version of your Cybersecurity Risk Assessment.

Need More Assistance?

We're here to help. In addition to the Cybersecurity Risk Assessment, AffirmX offers an IT Security and Vulnerability Assessment and its sister company, AdvisX, offers an IT Risk Assessment service and other IT-related consulting services, which can be engaged at an hourly rate to be agreed upon in a separate written statement of work.

We're Ready to Help

One flat, low fee can put AffirmX's Cybersecurity Risk Assessment Tool to work for you to help reduce your workloads, anxieties and costs. Contact us for a no-obligation proposal.
